2024_28_III_OOPS Using Java Lab

REC_2028_OOPS using Java_Week 4_MCQ

Attempt : 1
Total Mark : 15
Marks Obtained : 13

Section 1 : MCQ

1. Predict the output for the following code.

```
public class Main {  
    public static void main(String[] args) {  
        String a = "java";  
        char temp = a.charAt(1);  
        System.out.println(temp);  
    }  
}
```

Answer

j

Status : Wrong

Marks : 0/1

2. What will be the output of the following program?

```
public class Main {  
    public static void main(String[] args) {  
        String str = "1234.34";  
        int a = Integer.parseInt(str);  
        System.out.println(a);  
    }  
}
```

Answer

NumberFormatException

Status : Correct

Marks : 1/1

3. What will be the output for the following code?

```
class Main {  
    public static void main(String[] args) {  
        String languages[] = { "C", "C++", "Java", "Python", "Ruby" };  
        for (String sample: languages) {  
            System.out.println(sample);  
        }  
    }  
}
```

Answer

CC++JavaPythonRuby

Status : Correct

Marks : 1/1

4. What will be the output of the following code?

```
class Main {  
    public static void main(String args[]) {  
        String s1 = "Hello i love java";  
        String s2 = new String(s1);  
        System.out.println((s1 == s2) + " " + s1.equals(s2));  
    }  
}
```

}

Answer

false true

Status : Correct

Marks : 1/1

5. What will be the output of the following program?

```
class Main {  
    public static void main(String[] args) {  
        String s1 = "EDUCATION";  
        String s2 = new String("EDUCATION");  
        String s3 = "EDUCATION";  
        if (s1 == s2) {  
            System.out.println("s1 and s2 equal");  
        }  
        else {  
            System.out.println("s1 and s2 not equal");  
        }  
        if (s1 == s3) {  
            System.out.println("s1 and s3 equal");  
        }  
        else {  
            System.out.println("s1 and s3 not equal");  
        }  
    }  
}
```

Answer

s1 and s2 not equals1 and s3 equal

Status : Correct

Marks : 1/1

6. What will be the output of the following program?

```
class Main {  
    public static void main(String args[]) {  
        String name="Work Hard";
```

```
        name.concat("Success");
        System.out.println(name);
    }
}
```

Answer

Work Hard

Status : Correct

Marks : 1/1

7. What will be the output of the following program?

```
class Main {
    public static void main(String args[]) {
        StringBuffer sb = new StringBuffer("Hello");
        System.out.println("buffer = " + sb);
        System.out.println("length = " + sb.length());
        System.out.println("capacity = " + sb.capacity());
    }
}
```

Answer

buffer = Hello length = 5 capacity = 21

Status : Correct

Marks : 1/1

8. Predict the output for the following code.

```
class Main {
    public static void main(String[] fruits) {
        String fruit1 = new String("apple");
        String fruit2 = new String("orange");
        String fruit3 = new String("pear");
        fruit3 = fruit1;
        fruit2 = fruit3;
        fruit1 = fruit2;
        System.out.println(fruit1);
        System.out.println(fruit2);
        System.out.println(fruit3);
```

```
}
```

Answer

appleappleapple

Status : Correct

Marks : 1/1

9. Predict the output for the following code:

```
class Main {  
    public static void main(String args[]) {  
        StringBuffer sb = new StringBuffer("I Java!");  
        sb.insert(5, "like ");  
        System.out.println(sb);  
    }  
}
```

Answer

I Java like a!

Status : Wrong

Marks : 0/1

10. What will be the output of the following program?

```
class Main {  
    public static void main(String[] args) {  
        String s = new String("5");  
        System.out.println(1 + 1111 + s + 1 + 1010);  
    }  
}
```

Answer

1112511010

Status : Correct

Marks : 1/1

11. What will be the output of the following program?

```
class Main {  
    public static void main(String[] args) {  
        String greet = "Welcome\n";  
        System.out.print("String: " + greet);  
        int length = greet.length();  
        System.out.print("Length: " + length);  
    }  
}
```

Answer

String: WelcomeLength: 8

Status : Correct

Marks : 1/1

12. What is the output of the following code?

```
class Main
{
    public static void main(String args[])
    {
        StringBuffer c = new StringBuffer("Hello");
        c.delete(0,2);
        System.out.println(c);
    }
}
```

Answer

110

Status : Correct

Marks : 1/1

13. What will be the output of the following code?

```
class Main {  
    public static void main(String args[]) {  
        char c[] = {'j', 'a', 'v', 'a'};  
        String s1 = new String(c);  
        String s2 = new String(s1);
```

```
        System.out.println(s1);
        System.out.println(s2);
    }
}
```

Answer

javajava

Status : Correct

Marks : 1/1

14. Predict the output for the following code:

```
public class Main {
    public static void main(String[] args) {
        float a = 10.0f;
        String temp = Float.toString(a);
        System.out.println(temp);
    }
}
```

Answer

10.0

Status : Correct

Marks : 1/1

15. What will be the output of the following code?

```
class Main {
    public static void main(String args[])
    {
        StringBuffer sb = new StringBuffer("Hello");
        System.out.println("buffer before = " + sb);
        System.out.println("charAt(1) before = " + sb.charAt(1));
        sb.setCharAt(1, 'i');
        sb.setLength(2);
        System.out.println("buffer after = " + sb);
        System.out.println("charAt(1) after = " + sb.charAt(1));
    }
}
```

Answer

buffer before = HellocharAt(1) before = ebuffer after = HicharAt(1) after = i

Status : Correct

Section 1 : Coding

1. Problem Statement

In a publishing company, editors often need to quickly analyze passages of text to check for punctuation usage. To assist them, you are asked to write a program that counts the number of specific punctuation marks in each passage.

The punctuation marks of interest are:

Commas (,)Periods (.)Question marks (?)

Input Format

The first line of input contains an integer T, representing the number of test cases (passages).

Each of the next T lines contains a single passage of text.

Output Format

For each test case, print three integers separated by spaces, representing the number of commas, periods, and question marks in the passage.

The first line of output corresponds to the first passage, the second line to the second passage, and so on.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 1

Hello, world. How are you?

Output: 1 1 1

Answer

```
import java.util.Scanner;
```

```
public class Main {  
    public static void main(String[] args) {  
        Scanner scanner = new Scanner(System.in);  
  
        // Read number of test cases  
        int T = Integer.parseInt(scanner.nextLine());  
  
        for (int i = 0; i < T; i++) {  
            String passage = scanner.nextLine();  
  
            int commas = 0;  
            int periods = 0;  
            int questions = 0;  
  
            // Loop through each character in the passage  
            for (char c : passage.toCharArray()) {  
                if (c == ',') {  
                    commas++;  
                } else if (c == '.') {  
                    periods++;  
                } else if (c == '?') {  
                    questions++;  
                }  
            }  
            System.out.println(commas + " " + periods + " " + questions);  
        }  
    }  
}
```

```
        questions++;
    }
}

// Print result for this passage
System.out.println(commas + " " + periods + " " + questions);
}

scanner.close();
}
```

1. Problem Statement

Anu is developing a tool for a conference registration system. Participants submit keywords related to their fields of interest. The organizer wants to sort these keywords alphabetically to generate tags for session grouping.

Write a program that accepts at least five keywords as input arguments and outputs them in sorted alphabetical order.

Input Format

The first line of input contains an integer n, representing the number of keywords.

The second line of input contains n space-separated keywords (string).

Output Format

The output prints n space separated strings representing the sorted keyword in alphabetical order.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 5
Blockchain Cloud AI Data Cybersecurity
Output: AI Blockchain Cloud Cybersecurity Data

Answer

```
// You are using Java
import java.util.*;
public class Main{
    public static void main(String args[]){
        Scanner scanner = new Scanner(System.in);
        int x=scanner.nextInt();
        String[] arr=new String[x];
        for(int i=0;i<x;i++){
            arr[i]=scanner.next();
        }
        Arrays.sort(arr);
        for(int i=0;i<x;i++){
            System.out.print(arr[i]);
        }

1. Problem Statement

Bechan Chacha is seeking help to filter out valid mobile numbers from a list provided by his crush. He can only pick his crush's number if the list contains valid mobile numbers.

A mobile number is considered valid if:

It has exactly 10 digits. It consists only of numeric values (0–9). It does not begin with zero.

Your task is to determine whether each mobile number in the list is valid or not.

Input Format

The first line contains an integer T, representing the number of mobile numbers

to check.

The next T lines each contain a string S, representing a mobile number.

Output Format

For each mobile number S, the output print "YES" if it is valid.

Otherwise, print "NO".

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 1
9876543210
Output: YES

Answer

```
import java.util.Scanner;

public class Main {
    public static void main(String[] args) {
        Scanner scanner = new Scanner(System.in);

        // Read the number of mobile numbers to validate
        int T = Integer.parseInt(scanner.nextLine());

        for (int i = 0; i < T; i++) {
            String number = scanner.nextLine();

            // Check if number is valid

1. Problem Statement

Arjun is learning how to filter words from a sentence based on grammar rules. He wants to identify the valid words in a sentence.

A word is considered valid if it satisfies all these conditions:

The word contains only alphabets (a–z, A–Z). The word length is at least 2 characters. The word should not contain digits or special characters.

Your task is to read a sentence and print all the valid words in it.

Input Format

The input contains a single line containing a sentence S.

Output Format

The output prints all the valid words separated by spaces.

If no valid word exists, print "No valid words."

Refer to the sample output for formatting specifications.

Sample Test Case

Input: Hello world1 123 ab" @#\$ Hi

Output: Hello Hi

Answer

```
import java.util.Scanner;

public class Main {
    public static void main(String[] args) {
        Scanner scanner = new Scanner(System.in);

        // Read the entire line as input

1. Problem Statement

Sana is analyzing text for a secret code. She wants to find all words in a sentence that start and end with the same letter. These words are considered "special words" for her analysis.

Your task is to write a program that extracts and prints all words that start and end with the same letter (case-insensitive).

If no such word exists, print "No special words found".

Input Format

The input contains a single line containing a sentence with multiple words.

Output Format

The output prints all words that start and end with the same letter separated by a space.

If no word satisfies the condition, print "No special words found".

Refer to the sample output for formatting specifications.

Sample Test Case

Input: Anna went to the civic center

Output: Anna civic

Answer

```
import java.util.Scanner;

public class Main {
    public static void main(String[] args) {
        Scanner scanner = new Scanner(System.in);

        String line = scanner.nextLine();
        String[] words = line.split(" ");
        StringBuilder result = new StringBuilder();

        for (int i = 0; i < words.length; i++) {
            String word = words[i];

            // Convert to lowercase for case-insensitive comparison
            String lowerWord = word.toLowerCase();

            // Check if word has at least 1 character and starts and ends with same
            letter
            if (lowerWord.length() > 0 && lowerWord.charAt(0) ==
lowerWord.charAt(lowerWord.length() - 1)) {
                result.append(word).append(" ");
            }
        }

        if (result.length() > 0) {

        scanner.close();
    }
}
```

Status : Correct

Marks : 10/10

2. Problem Statement

At a digital library, the system needs to analyze passages to identify the frequency of vowels, since they are key for linguistic research. You are asked to write a program that counts the number of vowels in each passage of text.

The vowels of interest are:

a, e, i, o, u (both uppercase and lowercase).

Input Format

The first line of input contains an integer T, representing the number of test cases (passages).

Each of the next T lines contains a single passage of text.

Output Format

For each test case, print a single integer representing the total number of vowels in the passage.

The first line of output corresponds to the first passage, the second line to the second passage, and so on.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 1
Hello World
Output: 3

Answer

```
import java.util.Scanner;

public class Main {
    public static void main(String[] args) {
        Scanner scanner = new Scanner(System.in);

        int T = Integer.parseInt(scanner.nextLine());

        for (int i = 0; i < T; i++) {
            String passage = scanner.nextLine();
            int count = 0;

            for (int j = 0; j < passage.length(); j++) {
                char c = Character.toLowerCase(passage.charAt(j));
                if (c == 'a' || c == 'e' || c == 'i' || c == 'o' || c == 'u') {
                    count++;
                }
            }

            System.out.println(count);
        }
        scanner.close();
    }
}
```

Status : Correct

Marks : 10/10

3. Problem Statement

Ravi is analyzing text messages for his research on typing patterns. He wants to count the number of uppercase letters, lowercase letters, and digits in a sentence to understand typing trends.

Your task is to help Ravi by writing a program that takes a sentence and

prints the count of uppercase letters, lowercase letters, and digits.

Input Format

The input contains a single line containing a sentence (string).

Output Format

The output prints three integers separated by spaces:

- Number of uppercase letters
- Number of lowercase letters
- Number of digits

Refer to the sample output for formatting specifications.

Sample Test Case

Input: Hello World 123

Output: 2 8 3

Answer

```
import java.util.Scanner;

public class Main {
    public static void main(String[] args) {
        Scanner scanner = new Scanner(System.in);

        String sentence = scanner.nextLine();

        int uppercase = 0;
        int lowercase = 0;
        int digits = 0;

        for (int i = 0; i < sentence.length(); i++) {
            char c = sentence.charAt(i);

            if (Character.isUpperCase(c)) {
                uppercase++;
            } else if (Character.isLowerCase(c)) {
                lowercase++;
            } else if (Character.isDigit(c)) {
                digits++;
            }
        }

        System.out.println(uppercase + " " + lowercase + " " + digits);
    }
}
```

```
        } else if (Character.isDigit(c)) {  
            digits++;  
        }  
    }  
  
    System.out.println(uppercase + " " + lowercase + " " + digits);  
  
    scanner.close();  
}  
}
```

Marks : 10/10

4. Problem Statement

Riya is preparing a puzzle game for her friends. She wants to include a feature that highlights special words in a sentence – specifically, palindromic words (words that read the same forward and backward).

Your task is to help Riya by writing a program that extracts all palindrome words from the given sentence. If there are no palindromes, print "No palindromes found".

Input Format

The input contains a single string S representing a sentence.

Output Format

The output prints all palindromic words separated by a space.

If no palindrome exists, print "No palindromes found".

Refer to the sample output for formatting specifications.

Sample Test Case

Input: madam went to school

Output: madam

Answer

```
import java.util.Scanner;

public class Main {
    public static void main(String[] args) {
        Scanner scanner = new Scanner(System.in);

        String sentence = scanner.nextLine();
        String[] words = sentence.split(" ");

        StringBuilder result = new StringBuilder();

        for (int i = 0; i < words.length; i++) {
            String word = words[i];
            boolean isPalindrome = true;

            int len = word.length();
            for (int j = 0; j < len / 2; j++) {
                if (word.charAt(j) != word.charAt(len - 1 - j)) {
                    isPalindrome = false;
                    break;
                }
            }

            if (isPalindrome) {
                result.append(word).append(" ");
            }
        }

        if (result.length() > 0) {
            // Remove trailing space and print result
            System.out.print(result.toString().trim());
        } else {
            System.out.print("No palindromes found");
        }

        scanner.close();
    }
}
```

1. Problem Statement

In a university library, librarians need to track the usage of special characters in students' notes.

To help them, you are asked to write a program that counts the number of specific symbols in each passage of text.

The symbols of interest are:

Exclamation marks (!) Colons (:) Semicolons (;

Input Format

The first line of input contains an integer T, representing the number of test cases (passages).

Each of the next T lines contains a single passage of text.

Output Format

For each test case, print three integers separated by spaces, representing the number of exclamation marks, colons, and semicolons in the passage.

The first line of output corresponds to the first passage, the second line to the second passage, and so on.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 1

Hello! How are you

Output: 1 0 0

Answer

```
// You are using Java
import java.util.Scanner;

public class Main {
    public static void main(String[] args) {
        Scanner scanner = new Scanner(System.in);

        int T = Integer.parseInt(scanner.nextLine());

        for (int i = 0; i < T; i++) {
            String passage = scanner.nextLine();

            int exclamations = 0;
            int colons = 0;
            int semicolons = 0;

            for (int j = 0; j < passage.length(); j++) {
                char c = passage.charAt(j);
                if (c == '!') {
                    exclamations++;
                } else if (c == ':') {
                    colons++;
                }
            }
        }
    }
}
```

```
        } else if (c == ':') {
            semicolons++;
        }
    }
    System.out.println(exclamations + " " + colons + " " + semicolons);
}
scanner.close();
}
```

2. Problem Statement

Anjali is preparing a report on text complexity. She wants to identify all words in a sentence that contain at least one digit so she can analyze numeric mentions.

Your task is to write a program that extracts and prints all words containing at least one digit from a given sentence.

If no such word exists, print "No words with digits found".

Input Format

The input contains a single line containing a sentence with multiple words.

Output Format

The output prints all words containing at least one digit separated by a space.

If no word contains a digit, print "No words with digits found".

Refer to the sample output for formatting specifications.

Sample Test Case

Input: The model X100 and Y200 are available

Output: X100 Y200

Answer

```
// You are using Java
import java.util.Scanner;

public class Main {
    public static void main(String[] args) {
        Scanner scanner = new Scanner(System.in);

        String sentence = scanner.nextLine();
        String[] words = sentence.split(" ");

        StringBuilder result = new StringBuilder();

        for (int i = 0; i < words.length; i++) {
            String word = words[i];
            boolean hasDigit = false;

            for (int j = 0; j < word.length(); j++) {
                if (Character.isDigit(word.charAt(j))) {
                    hasDigit = true;
                    break;
                }
            }

            if (hasDigit) {
                result.append(word).append(" ");
            }
        }

        if (result.length() > 0) {
            // Remove trailing space
            System.out.print(result.toString().trim());
        } else {
            System.out.print("No words with digits found");
        }

        scanner.close();
    }
}
```

3. Problem Statement

A library wants to analyze book titles to count the number of words that start with an uppercase letter. This helps the library track proper nouns and important words in titles.

Your task is to write a program that, for each given title, counts and prints the number of words that start with an uppercase letter.

Input Format

The first line contains an integer T, representing the number of book titles.

Each of the next T lines contains a single title (string).

Output Format

For each title, the output print a single integer representing the number of words starting with an uppercase letter.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 1

The Chronicles of Narnia

Output: 3

Answer

```
// You are using Java
import java.util.Scanner;

public class Main {
    public static void main(String[] args) {
        Scanner scanner = new Scanner(System.in);
        int T = Integer.parseInt(scanner.nextLine());
```

```
for (int i = 0; i < T; i++) {  
    String title = scanner.nextLine();  
    String[] words = title.split(" ");  
  
    int count = 0;  
  
    for (int j = 0; j < words.length; j++) {  
        String word = words[j];  
        if (word.length() > 0 && Character.isUpperCase(word.charAt(0))) {  
            count++;  
        }  
    }  
    System.out.println(count);  
}  
scanner.close();  
}  
}
```

Marks : 10/10

4. Problem Statement

In a college, students are required to create unique usernames for accessing the digital library.

The librarian needs your help to verify whether the usernames entered by students are valid.

A username is considered valid if:

It contains only letters (a–z, A–Z) and digits (0–9). Its length is between 5 and 15 characters (inclusive). It must start with a letter (not a digit).

Your task is to determine whether each username in the list is valid or not.

Input Format

The first line of input contains an integer T, representing the number of

usernames to check.

The next T lines each contain a string S, representing a username.

Output Format

For each username S, the output print "YES" if it is valid.

Otherwise, the output print "NO".

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 1

Alice123

Output: YES

Answer

```
// You are using Java
import java.util.Scanner;

public class Main {
    public static void main(String[] args) {
        Scanner scanner = new Scanner(System.in);

        int T = Integer.parseInt(scanner.nextLine());

        for (int i = 0; i < T; i++) {
            String username = scanner.nextLine();

            // Check length
            if (username.length() < 5 || username.length() > 15) {
                System.out.println("NO");
                continue;
            }

            // Check first character is a letter
            char firstChar = username.charAt(0);
            if (!Character.isLetter(firstChar)) {
                System.out.println("NO");
            }
        }
    }
}
```

```
        continue;
    }

    // Check all characters are letters or digits
    boolean isValid = true;
    for (int j = 0; j < username.length(); j++) {
        char c = username.charAt(j);
        if (!Character.isLetterOrDigit(c)) {
            isValid = false;
            break;
        }
    }

    if (isValid) {
        System.out.println("YES");
    } else {
        System.out.println("NO");
    }
}

scanner.close();
}
}
```
